

New product from iOptron®: SkyGuider™ Pro Camera Mount

Woburn, MA, March 22, 2017 – SkyGuider™ Pro™ high precision, easy to use extended function camera tracker.

Introducing The SkyGuider™ Pro -- iOptron's next generation camera tracking device! Leading the camera tracker market for nearly four years, iOptron's SkyGuider Pro pushes closer to perfection.

The all new SkyGuider™ Pro camera tracker offers high precision silent tracking, built-in rechargeable power source, ST-4 guiding port, and a port to connect an optional hand controller. The improved precision polar scope maintains a fine engraved reticule, and features adjustable illumination. Use with our smart phone app, for quick and accurate polar alignment. The DEC mounting bracket allows you to balance a heavy camera and/or lens better, or even mount a light telescope or second camera.

The SkyGuider™ Pro features four tracking rates, 1X or sidereal, 1/2X for sky and landscape, solar and lunar. All 4 tracking rates function in both northern and southern hemispheres. We have also added a bi directional quick slew mode to help quickly reframe your image without disrupting the cameras position. Its removable alt-azimuth base features a precision bubble level, degree markings for the altitude and fine tune adjustments for both the alt and azimuth axis's. You can also mount the SkyGuider™ Pro head (without the base) directly to any standard photographic tripod with 1/4" or 3/8" threads. The SkyGuider™ Pro is certainly a must have tool for any photographer interested in astroscape or wide field astrophotography.

The iOptron® SkyGuider™ Pro is available now at iOptron dealers worldwide.

About iOptron

Established in 2007, iOptron is a global company specialized in the developing, manufacturing, and marketing innovative astronomical telescopes, mounts & accessories, and cutting-edge optical instruments for multiple applications.

Headquartered in Woburn, Massachusetts, USA, iOptron owns state of the art engineering and manufacturing facilities in China. iOptron is a subsidiary of Boston Applied Technologies, a management buyout of Corning Applied Technologies from Corning Inc.
