

Can iPolar #3339A-060 fit my CEM60 Mount?

If you have an earlier production of CEM60, the in stock version #3339A-060 (internal iPolar) may not fit. How do I know? Please remove the front polar scope cover. Check the inner surface of the steel RA axle. If the inside is a smooth surface, the #3339A-060 will be fitted in. If there is fine threaded on it (as shown in the photo), it won't fit.

You may either choose #3339-060 external mounted iPolar or contact iOptron for further information.
