

iPolar Installation – SkyGuider

Either iPolar **#3339** or **#3339R** can be used for SkyGuider Camera Mount **#3500**. It will be installed at the back of the mount to replace the optical polar scope (internal/rear mounting.)

If you want to keep the optical polar scope, you can order **#3339-025** and refer to CEM25 instruction for installation. The front polar axle hole on the DEC bracket needs be enlarged.

Only a 1.5mm hex key is needed.

1. Unthread polar scope cover.

2. Find the polar scope locking screw and use 1.5mm hex key to release it slightly and pull out the polar scope.

3. Insert the iPolar into the RA axis. Lock the set screw gently to secure the iPolar.
